Subject: Lumiflon® FEVE Paint Suppliers

Dear ALPOLIC® Customers,

Recently we have been made aware that there may be some misunderstanding regarding the suppliers of Lumiflon® FEVE resin based paints and Mitsubishi Plastics Composites America would like to communicate the facts regarding. One large paint supplier has announced to the industry that they will no longer supply pigmented FEVE resin based paints. This company will still continue to supply the clear FEVE resin based paints for top coat applications and an air dry system.

Mitsubishi Plastics Composites America has partnered with Valspar® for our fluoropolymer based paint supply including systems based on the Lumiflon® FEVE resin (Valflon) and the Kynar® PVDF resin (Fluorpon). This industry announcement from another large supplier does not affect our business or our ability to supply the best finishes in the market.

Lumiflon® FEVE resin based fluorocarbon paints are extremely valuable to the architectural and corporate identity marketplace as these FEVE based finishes are the only paints on the market that offer high gloss and bright colors and pass AAMA 2605 performance criteria. Polyester paints can provide high gloss and bright colors but have not to date passed AAMA 2605. 70% PVDF based paints provide excellent highly durable finishes that pass AAMA 2605 but have a limited gloss and color range.

Mitsubishi Plastics Composites America is committed to providing the best customer services and highest quality ALPOLIC® material. Please contact ALPOLIC® Customer Service or your ALPOLIC® Sales Representative with any further questions regarding.

Best Regards,

Bill Yannetti
Sr. Manager – Technical Services
